

## Keeping our mob healthy

Pre-admission advice

# Laryngo-tracheo-bronchoscopy

A laryngo-tracheo-bronchoscopy is when a Ear Nose and Throat (ENT) doctor uses a fine telescope with a camera to look at bub's upper and lower airways.

- Bub will be given general anaesthetic (sleep medication) before the procedure.
- The ENT doctor will find out why bub has a problem and then help ease their symptoms.
- Bub may need more than one procedure.

#### Bub may need to have laryngo-tracheo-bronchoscopy if they have:

- · noisy or difficult breathing
- a cough that won't go away
- · soft cry or barky voice
- difficulty feeding or swallowing
- · something stuck in their airway.

#### Tell the doctor if bub:

- · has difficulty swallowing
- · is losing or is not gaining weight
- · tires easily when breathing or when active
- · snores.

## Go to the emergency department if bub:

Has trouble breathing

Is vomiting blood

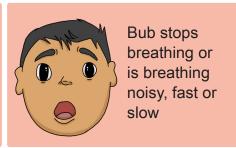

Is having trouble feeding or swallowing

Has a temperature 38°C or over

## Pre-operative information

The nurse will call you 2 days before bub's procedure. If you don't answer your phone, bub's appointment will be canceled. The number may come up as a private caller.

## The nurse will yarn to you about:

- The time to arrive at Perth Children's Hospital and the procedure time.
- When to start bub fasting/ empty tummy. Do not give bub any food, drinks, breast milk or formula.
- Fasting keeps bub safe during procedure.
- Tell the nurse if bub or any family members have problems with:
  - anaesthetics (sleeping medication)
  - · any allergies
  - · bleeding disorders.
- Let the nurse know what medications bub is taking and why.
- Yarn about any worries you may have.

#### Good to know

- Bub will be admitted to the hospital on the day, the procedure normally takes about 1 hour.
- If bub is unwell after the procedure they may need to stay in hospital overnight. The doctor will yarn with you.
- Bub may need another procedure after the laryngo-tracheo-bronchoscopy, the doctor will yarn with you about treatment.
- When at home, keep a close eye on bub, if they become unwell or you are worried you should take them to the emergency department.
- Lung sickness like colds, chest infections or being around smoke can make bub's breathing worse.
- To help bub heal they need to eat good tucker and may need to take prescribed medication.
